

# I want to install solar power on my roof

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How do you install solar panels on a roof?

Align the brackets with the panels' mounting holes using the correct screws and tools for a firm attachment. Double-check each bracket for stability, laying the groundwork for a sturdy installation. Next, install the mounting system on your roof, which usually includes rails to support the solar panels.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Should a roof be inspected by a solar panel installer?

Ideally, your roof should be inspected by a solar panel installer to make sure it's strong enough to support a roof-mounted solar panel system. However, as a starting point, think about the direction your home faces. If it's north facing, solar panels may not be suitable.
