Darren Hammel of Princeton Power Systems explains the changes that the Annobon Island microgrid will bring to this Equatorial Guinea community. Annobon Island is the southern-most island of Equatorial Guinea off the coast of west central Africa.

In rural territories, the communities use energy sources based on fossil fuels to supply themselves with electricity, which may address two main problems: greenhouse gas emissions and high fuel prices. Hence, there is an opportunity to include renewable resources in the energy mix. This paper develops an optimization model to determine the optimal sizing, the total annual ...
