

Can a microgrid be integrated with PV and wind power?

The combination and capacity of PV and wind power generation increase rapidly in the integration of microgrids; however, the sustainability of continuous power is very difficult due to the intermittent characteristics of irradiation and wind speed.

Does a combined PV/wind microgrid system improve system efficiency?

Hence, a comprehensive examination of the techno-economic advantages of a combined PV/Wind microgrid system is essential. Consequently, the hybrid combination of RESs has yielded productive outcomes in enhancing the system efficiency in the intermittent nature of RESs (Bui et al. 2022; Marocco et al. 2022; Peddakapu 2022).

Why is wind energy integration unpredictable?

Wind energy integration into power systems presents inherent unpredictability because of the intermittent nature of wind energy. The penetration rate determines how wind energy integration affects system reliability and stability.

How AI-enhanced energy management systems can improve microgrid performance?

AI-enhanced energy management systems (EMSs) have shown promising results in various microgrid configurations. For instance, field-programmable gate arrays (FPGAs) equipped with AI algorithms have significantly improved cost savings and reliability by dynamically adjusting to load and generation changes.

Can a biomass-battery combination be integrated into a microgrid system?

The integration of a biomass-battery combination within the microgrid system demonstrates a lower NPC and COE compared to alternative hybrid RE system configurations, showcasing a cost-effective and sustainable energy solution for Putrajaya City. 5.

Can a power system support a microgrid?

The electrical system's capacity to support microgrids (MGs) is further constrained by localized frequency constraints. To achieve this, a localized frequency estimate is essential in present power systems. Regional frequency prediction in present power systems has recently been the subject of some studies [60,61].
