

Is Peru on the road to energy transition?

Although there have been significant challenges, the country is well on the road to energy transition, with further opportunities ahead, write Miguel Valderrama (left), MBA candidate at the University of Cambridge, and Jose Carlos Palma (right), LatAm Area Manager with EDF International, both Co-Founders of PYEP (Peru Young Energy Professionals).

Who owns Enel Generación Perú & Luz del Sur?

Enel Generación Perú S.A.A., formerly Edegel, is the leading private electric power generation company in Peru, with approximately half of its energy coming from renewable sources. Luz del Sur, an important energy company primarily serving southeastern Peru, was sold to China Yangtze Power International in 2020.

Where is solar energy produced in Peru?

Solar energy is captured in the regions of Tacna, Moquegua, and Arequipa. Its production contributes to the nation's energy grid and aids the Photovoltaic Massive Program, which has brought electricity to 205,138 rural homes since the Peruvian government began implementing it in 2017.

Why does Peru still use faulty pipelines?

Despite orders to stop production following a spill, some companies continue to pump oil and use faulty pipelines. Indigenous groups have protested against oil and gas companies for years. Pipelines in Peru are also at risk due to seismic activity, heavy rains, and mudslides.

IPART is required to report annually on the performance and competitiveness of the retail energy markets in New South Wales. The Energy Market Monitoring review 2021-22 draft report sets out IPART's draft findings and recommendations on the performance and competitiveness of retail energy markets in New South Wales for 2021-22.

The operating environment for energy networks is changing, in particular due to climate change. IPART and network operators need to respond to ensure outcomes for the people of NSW do not deteriorate. In consultation with stakeholders, IPART has developed a 2022-25 Strategic Plan for our energy networks regulation role. This will allow us to ...

Established by amendments to the Electricity Supply Act 1995 in 2009, the mandatory Energy Savings Scheme (ESS) is a complement to GGAS and provides a financial incentive for retail electricity suppliers and other entities licensed to buy or directly supply electricity in NSW to reduce their electricity consumption and increase their energy efficiency.

Apply to IPART if you want to become an ACP. Before you think about applying, you should: Look at whether working with an existing ACP would be more appropriate (for example if your activity is a small or one-off project or your business does not have the capacity to meet ESS requirements).

An important part of IPART's electricity network compliance framework is to have independent audits undertaken to test compliance with regulatory obligations. This is in addition to our compliance reporting regime. For these audits, all auditors must be independent and approved by IPART before undertaking an audit.

The Compliance Priorities set out where IPART's Energy Sustainability Schemes Team will focus its compliance resources for the year. Being transparent about our Compliance Priorities can assist businesses to understand where compliance attention will be focussed and to take steps to address identified risks.

Customers should seek out a better deal using Government run websites like EnergyMadeEasy and Energy Switch. This year IPART's review also assessed the impact of COVID-19 on the retail energy markets. Many customers will also be using energy differently as a result of the changes from COVID-19 restrictions, such as work from home arrangements ...

Comparison of financial models - IPART and Australian Energy Regulator IPART 5 The AER splits the return on assets into return on equity and return on debt by multiplying the nominal residual RAB value by the proportion of equity or debt funding. It does this to identify the interest payment that it needs to calculate the
