What is Enphase iq7a microinverter?

The high-powered Enphase IQ7A Microinverter dramatically simplifies the installation process while achieving high system efficiency for systems with 60-cell, 66-cell, and 72-cell modules.

Micro-inverters are small, panel-level inverters that attach directly to the back of each solar panel in a system. Unlike traditional string inverters that handle the output of an entire array of panels, micro-inverters work on an individual basis, converting DC to AC electricity right at the source.

Enphase IQ8+ Microinverters offer efficient DC to AC conversion with split-phase power and enhanced reliability, ideal for grid-tied or off-grid systems, backed by a 25-year limited warranty.

Our inverters come from top European manufacturers (Victron & Fronius). They provide top-quality inverters with guarantees of up to 25 years. Our cables are from Prysmian, which is the global leader in the cable systems industry.

Microinverters are located on the roof near the solar panels, due to which these inverters are more efficient than string inverters when it comes to converting energy. Solar systems with microinverters can still generate electricity, even if one or two panels do not perform properly.
