

## Is there solar power generation in mountainous areas

Can a solar tree be installed in a mountainous area?

The solar tree has not been popularized yet, so the forest-photovoltaic field has many problems to be solved and is only in its infancy. The solar tree installed in mountainous areas will have a higher fixed load (self-load of solar power system), wind load, and snow load than the flat fixed panel.

How was a solar power plant built?

"The solar power plant was constructed by cutting a mountainous ridge available in the highly elevated plateau into flat land," they explained. "The solar panels installed on the 3-meter-high structure made a space for farming in the ground. One kind of ginseng, mountain garlic, is being grown in the space at the bottom of solar power facilities."

Could solar trees be used to build photovoltaic plants?

Solar tree installed around the space used as farmland. Researchers from the Korea Maritime Institute have proposed the use of solar trees to build photovoltaic plants in mountainous forest areas in land-scarce South Korea.

Can a solar agrivoltaic plant operate on Google Earth?

Using Google Earth satellite imagery, the Korean group assessed the concept's operational potential by simulating solar tree installations in a mountainous area at 400 meters above sea level, where there is an operating agrivoltaic plant relying on solar trackers.

Can solar trees be used in forest areas?

Scientists in land-scarce Korea are proposing to use solar trees to build PV installations in forest areas. Although more expensive than conventional ground-mounted facilities, solar plants made of solar trees may capture carbon from forest land and produce energy at the same time. Solar tree installed around the space used as farmland.

Can solar power plants grow ginseng?

The solar panels installed on the 3 m high structure made a space for farming in the ground. One kind of ginseng, mountain garlic, is being grown in the space at the bottom of solar power facilities.
