

Jersey solar power home generator

What is a solar charging generator?

Generators that utilize solar charging are a reliable source of renewable solar energy in a power outage, or when you need electricity outdoors.

What is a solar generator & how does it work?

Solar generators convert sunlight into energy to power your devices and appliances when you don't have electricity, making them a perfect item to bring with you on a camping trip, or as a home backup system for running small appliances during a power outage.

Are solar generators portable?

Solar generators are available as both portable generators and backup home generators. Most solar generators are portable, lightweight, and have a built-in handle. The best portable solar generators are used to provide power for construction sites, campers, events, or other settings where access to electricity is limited.

Which solar generator should I buy?

With its durable enclosure and ergonomic design, the GB2000 is our top choice if you're looking to take your solar generator outdoors. The 2,106-watt lithium-ion battery packs plenty of power in a relatively compact package, and the "parallel ports" make it possible to connect two units together, effectively doubling the power output.

Are solar-powered generators a good option for storm preparation?

Solar-powered generators have only been around for a few years, but they've quickly become a key part of many homeowners' storm preparation plans. Also known as portable power stations, they can keep appliances like refrigerators and furnaces running during emergency outages -- but they're also handy for campsites, construction sites and RVs.

Can a solar generator support off-grid living?

Yes. Some generators use electricity or gas for power, and all power generators are able to support off-grid living. However, some people prefer solar generators for the following reasons: They're more eco-friendly because they use energy from the sun as opposed to fossil fuels.

With solar, you're essentially acquiring an electricity generation facility for your property, meeting a portion of your future energy needs for many years to come. The average self-generated electricity unit costs around \$0.10 over the system's lifespan, well below grid rates.

The application process below is available to all Jersey Central Power & Light (JCP& L) customers that generate electricity on the customer's side of the meter, including third parties developing a project under the Community Solar Pilot Program.
