

Where does Kazakhstan get its electricity from?

Being rich in fossil fuels, Kazakhstan gets most of its electricity from coal and natural gas. According to the Kazakh Ministry of Energy, in 2023 the electricity generated by renewable energy sources reached only 5.92% of the total electricity production.

Why should Kazakhstan export green energy to Europe?

By exporting green electricity and green hydrogen to Europe, Kazakhstan can provide a stable and sustainable energy supply, helping the EU meet its climate goals and reduce dependence on fossil fuels. Also, from the EU perspective, Kazakhstan's burgeoning renewable energy sector holds the key to bolstering Europe's energy security.

Does Kazakhstan need more energy?

As Kazakhstan expands renewables, more investment will be needed in flexible capacity such as gas-fired and hydro power plants to accommodate the variability of solar and wind output, the report says. Kazakhstan's system currently relies significantly on electricity imports from Russia to cover imbalances and maintain frequency stability.

Are energy prices a social concern in Kazakhstan?

The report recognises that energy prices are a significant social concern in Kazakhstan. A rise in prices for liquefied gas used in vehicles contributed to the unrest that gripped the country in January 2022. However, low prices have made it difficult to diversify the types of energy used for the domestic market and to promote energy efficiency.

Is Kazakhstan at a crossroads in its energy sector?

Kazakhstan, a vast and resource-rich nation in Central Asia, is at a crossroads in its energy sector. With a growing emphasis on sustainability and a need to align with global decarbonization efforts, the country is embarking on a transformative initiative that aims to ensure the security and reliability of its energy supply.

Is Kazakhstan suitable for wind energy production?

More importantly, the Central Asian nation's steppe geography makes it suitable for wind energy production. In 2023, the volume of electricity generated by wind power plants amounted to 3.8 billion kWh, while experts estimate the potential of wind energy in Kazakhstan at 920 billion kWh per year.

This in-depth review of the energy policies of Kazakhstan follows the same format used by the International Energy Agency (IEA) to review member countries. It was conducted under the auspices of the EU4Energy programme, which is being implemented by the IEA and the European Union, along with the Energy Community Secretariat and the Energy Charter ...

## Kazakhstan stable energy

Samruk-Energy has an SCP of "b+" and is rated two notches below the Kazakhstan sovereign, while KEGOC, with its "bb+" SCP is rated one notch below the sovereign. KEGOC's stronger SCP compared with Samruk-Energy reflects its lower business risk profile and stronger leverage.
