Does Kyrgyzstan have solar energy?

Kyrgyzstan's geographic location and climatic conditions are quite favourable for the broader development of solar energy, evident in solar radiation maps.

Where does power come from in Kyrgyzstan?

In Kyrgyzstan's predominantly mountainous terrain, winds of constant direction and strength sufficient for power generation can only be found in remote and sparsely populated areas.

How many geothermal sources are there in Kyrgyzstan?

Kyrgyzstan has more than 30 geothermal sources, but only some of them are used, and then only in sanatoriums and resorts (e.g. Issyk-Ata and Teplye Klyuchi) due to their low capacity.

How will Gazprom Kyrgyzstan improve the gas grid?

A more reliable supply of gas and implementation of Gazprom Kyrgyzstan's investment programme to improve the gas grid will further encourage switching from electricity to gas and coal.

How much energy does a solar plant generate?

The installed capacity of the solar plant is 10 kW and the total battery capacity is 8 kW. In one year (from February 20, 2019, to February 20, 2020), solar panels generated 10,977 kW of electricity. This helped UNDP to provide 35% of the office server room needs with clean energy. More battery capacity is needed to further increase the volume.

Why does Kyrgyzstan lack technology research and development?

Technology research and development is almost non-existent in Kyrgyzstan: the main reasons for this are a lack of funding (state funding of research institutes under the National Academy of Science is insufficient) and the country's small market. The most recent research by the National Academy of Science includes:

When we talk about "storage," we're talking about systems that can collect electricity, store it as a different kind of energy, and then release it when needed. Energy storage and solar batteries are sometimes different. Although not all forms of energy storage are batteries, batteries are one type or technology of energy storage.
