

How much energy does Latvia use?

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030.

What is the energy issue in Latvia?

In Latvia, the energy issue is one of the challenges on the path to a market economy. Since the Second World War, renewable resources such as hydro energy and wood have been traditional sources for production of electricity and heat in this Baltic Country.

What are the different types of energy sources in Latvia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Latvia: How much of the country's energy comes from nuclear power?

What is Latvia's energy strategy?

Latvia's current government strategy focuses on the gradual growth of energy efficiency and the use of renewable energy resources. Due to this, the government has outlined a path of energy transition from a heavy reliance on fossil fuel energy sources to an independent energy supply.

Is biomass a source of electricity in Latvia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Latvia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What is the main renewable resource in Latvia?

The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into consideration the fact that Latvia cannot offer big subsidies in order to attract investment.

Latvia's 2020 National Renewable Actions Plan targets a 40% share of energy generated from renewable sources in gross final energy consumption, 53% of heat consumption met by renewable sources and 60% of electricity demand met by electricity generated
