Should you rent out or install solar panels in a warehouse?

Consider renting out your roof space. If you have a warehouse with plenty of roof space but you don't want to install solar panels, you can consider renting it out and in turn pay a discounted rate for solar electricity. That way, you can get the cost-saving advantages of a solar energy system without outright buying and installing one.

Which warehouses can benefit from solar PV technology?

Warehouses with higher energy consumption, such as those used for temperature-controlled storage, are ideal for solar PV technology as they can benefit greatly from the reduced energy costs. For example, cold storage facilities need a large amount of energy to maintain low temperatures, and some of this energy can be offset by using solar panels.

How to install solar panels for warehouses?

There are several ways to install solar panels for warehouses and angle them in such a way as to achieve optimal energy generation. To summarise, the most suitable warehouses for solar PV technology are those with high energy consumption and large, unobstructed roof areas facing south.

Can solar PV be installed on warehouse roofs?

Installing solar PV on warehouse roofs means generating free electricity for the warehouse and adjacent buildings, such as offices. Warehouse and logistics firms can significantly reduce their energy bills with a solar PV system.

Can SMEs install solar panels on warehouse roofs?

Based on this, the general consensus is that SMEs can consider installing solar PV panels on their warehouse roofs, despite typical UK weather conditions. The primary benefit of a solar PV panel installation for an SME, the reduction in your energy bill and carbon emissions will depend on how much of your energy you generate with solar panels.

Which warehouse is best for solar panels?

Warehouses facing south. Warehouses facing south are considered ideal for solar panel installations as they receive the most direct sunlight, thus maximizing energy production. Though, as we just discovered, solar panels don't need to be in direct contact with sunlight to produce energy and will still produce it on cloudy days.

Finally, external influences also make up a portion of solar panel fires. External influences that can cause solar panel fires include moisture and water ingress into parts of the PV system, such as the DC and AC connectors.
