

What is a solar inverter?

Inverter - Converts DC power from the solar panel and battery to AC power. The system is a standalone system which is a system independent of the electricity grid, with the excess energy produced being stored in batteries to be used and managed by an inverter. The size of the PV system installed is 2000Wp.

How do I maintain my solar PV system?

Establishing and adhering to safety measures and procedures is vital when performing maintenance on your solar PV system. Start by familiarizing yourself with the manufacturer's safety recommendations and guidelines. Additionally, ensure that you have a clear understanding of the electrical system and its associated hazards.

Are string inverters a good option for solar PV system?

Similar to central inverters but convert DC power generated from a PV string. String inverters provide a relatively economical option for solar PV system if all panels are receiving the same solar radiance without shading. Under shading scenarios, micro-inverters may be considered as a more
