

Does Ukraine still receive gas from Russia?

Meanwhile, Ukraine's share of those exports has dropped from 11% to 5%. However, not all European countries have been successful in ending their energy dependency on Russia. As we approach 2025, Austria still receives most of its gas via Ukraine from Russia.

How dangerous is Ukraine's energy infrastructure in 2024?

With the escalation of attacks against Ukraine's energy infrastructure in 2024, the risks are significantly higher this winter. Temperatures can routinely drop below -10 °C between December and March, posing a serious humanitarian risk if heating is not available.

Is the energy sector under a massive attack in Ukraine?

"The enemy continues its terror. Once again, the energy sector across Ukraine is under massive attack," Ukrainian energy minister German Halushchenko said on his official Facebook page. The extent of the damage had yet to be clarified, he said, while urging people to remain in shelters.

Does Ukraine have a natural gas crisis?

Some above-ground natural gas storage infrastructure has been damaged, although underground inventories remain unaffected. Ukraine experienced an acute power deficit over the summer months of 2024, when its generation capacity fell 2.3 GW below its peak demand of 12 GW, despite electricity imports from Ukraine's western neighbours.

How important is Ukraine's energy sector?

Ukraine's air defences provided some protection, but the scale of the attack and the resulting disruption highlighted once again the vital strategic importance of Ukraine's energy sector, as well as the ever-present risks to the country's energy supply.

Why did UkrEnergo increase power supply restrictions on Friday?

As a result of the attack, the UkrEnergo National Power Company had to increase power supply restrictions on Friday, with rolling blackouts being introduced in all regions. UkrEnergo added that during the day on Friday, electricity would be imported from Poland, Romania, Slovakia, Hungary and Moldova.

The attack was "one of the largest strikes targeting our energy infrastructure" to date, Zelensky said. Russia launched at least 93 missiles, he added, including at least one North Korean weapon.

Through substantial governmental, financial, and technological support, Ukraine is not only weathering the immediate challenges but is also building a cleaner, more robust energy future which will also provide opportunities for international participation in the sector.

Ukraine extracts about 20 billion cubic meters of fossil gas each year, and since 2022 this has almost met demand. [14] Ukraine has been estimated to possess natural gas reserves of over 670 billion cubic meters (in 2022), [15] and gas is an important part of energy in Ukraine. In 2021, Ukraine produced 19.8 billion cubic meters (bcm or Gm 3) of natural gas.

2 ???· The International Atomic Energy Agency had made a renewed call on Thursday for Russia to stop targeting Ukraine's energy infrastructure: The agency's board of governors signed a resolution ...

With the escalation of attacks against Ukraine's energy infrastructure in 2024, the risks are significantly higher this winter. Temperatures can routinely drop below -10 °C between December and March, posing a serious humanitarian risk if heating is not available.

Since 2022, and especially since March 2024, Ukraine's energy infrastructure has been degraded in ways that make this winter the sternest test yet for Ukraine's energy system. These risks are already visible and foreseeable; they can be exacerbated by continued targeting of energy infrastructure by Russia and mitigated by successful air ...
