

# Mauritania battery storage power station cost

Amosolar is excited to showcase our latest project in Mauritania, featuring our black-rack lithium batteries in 48V100Ah, 200Ah, and 51.2V100Ah, 200Ah capacities. These high-performance lithium ion solar batteries provide reliable energy storage solutions for solar ...

This activity will support additional activities for the private sector participation in the development of the battery storage and VRE investments in Mauritania compliant with the ECOWAS system.

o Technology Selection: Li-ion technology allows to reach a 20y lifetime at a cost around 200 USD/kWh, while ensuring good efficiency (85%). Other technologies were considered in the feasibility study (Lead Acid, Sodium Sulfur, Zebra, Vanadium Redox Flow, and ZbBr Hybrid Flow) and Li-ion was considered most efficient for Mauritania's needs.

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

This is according to a new IEA report, Renewable Energy Opportunities for Mauritania, which finds that the country could deploy these resources at scale to generate low-cost renewable electricity and hydrogen through electrolysis.
