

Microgrid Development History in China

Why is micro-grid important in China?

Micro-grid is becoming an important aspect of future smart grid, which features control flexibility, improved reliability and better power quality. This paper conducts an overview of research and development of micro-grids in China. There are abundant renewable resources in China, which can benefit the development and application of micro-grids.

What is the future development direction of microgrids in China?

The future development direction of microgrids in China will therefore be towards an energy system that integrates electricity, gas, water, and heat resources, achieves mutual coupling, and solves the problems of efficient energy utilization and peak regulation.

Will China build a micro-grid?

Finally, in recent years, China continues to formulate new policies to encourage the construction and development of micro-grid. "The National Energy Board will build 30 micro-grids demonstration projects during 'the twelfth 5-year'. Preliminary estimates by 2015, China's investment on microgrid will reach 3.167 billion yuan." reported in.

Where did research on Microgrid technology start?

Research on microgrid technologies started relatively late in China. Compared with the huge research teams composed of research institutions, manufacturers and power companies in developed countries and regions such as Europe, the United States, and Japan, there is still a big gap in research strength and research results in China.

Do microgrid technologies face new challenges in China?

After years of development in China, microgrid technologies have achieved remarkable results, but there are still a lot of smart device issues that need to be addressed throughout the entire microgrid system. At the same time, microgrid technologies face new challenges under the background of the new era of electricity sector development.

What is the research on DC microgrids in China?

From 2009 to 2016, research on DC microgrids in China has gradually involved many different aspects, such as the study of DC microgrid power electronic converters, DC circuit breakers, and other key equipment, as well as operation control technology, protection, and energy management.

1.2 China's Current and Planned Policies Regarding MG

Based on 2018 data, China's microgrid market has reached 4.37 billion RMB (~620 million USD), with an annual increase of 9.8%. It is estimated the market will reach 7 billion RMB (1 billion ...

Microgrid Development History in China

An overview of experiences with microgrids policies in China shows that optimal capacity planning for microgrid, energy storage technologies, and incentive market policy are key factors to...

The microgrid is a new concept in China and may potentially play an important role in enhancing the resilience and sustainability of electricity generation and distribution. ...

In recent years, the microgrid has rapidly developed because of its advantages, such as easy integration of distributed renewable energy and flexibility in operation. The megawatt (MW) ...

Based on advanced information and communication technology, power systems are developing towards "smart grids". As an effective way to realize the active distribution system of a smart ...

The microgrid is a new concept in China and may potentially play an important role in enhancing the resilience and sustainability of electricity generation and distribution. However, the ...
