

Microgrid services Turks and Caicos Islands

The solar plus battery microgrids are among several strategic investments that FortisTCI is making to meet growing energy demand and accelerate the transition to renewable energy, reducing carbon emissions and lowering energy costs over time.

We invite you to watch our video highlight to see how we're making strides in reducing fuel dependence, lowering electricity costs, and supporting a cleaner, more sustainable future for the Turks and Caicos Islands.

To propel the TCI into an era of clean energy, FortisTCI will invest \$8m to install the country's first solar plus battery microgrids to power 30% of the electricity supply on North and Middle Caicos and 91% of the electricity supply on Salt Cay in 2024.

FortisTCI, the energy provider in the Turks and Caicos Islands, is making significant strides in constructing the country's first utility-scale solar plus battery microgrid on its property in Kew, North Caicos.

Providenciales, Turks and Caicos Islands (Thursday, June 8, 2023) - FortisTCI will invest \$8 million to install the country's first solar plus battery microgrids to power 30% of the electricity supply on North and Middle Caicos and 91% of ...

Providenciales, Turks and Caicos Islands (Thursday, June 8, 2023) - FortisTCI will invest \$8 million to install the country's first solar plus battery microgrids to power 30% of ...

The twin islands of North Caicos and Middle Caicos are electrically interconnected and are powered by the Providenciales main electricity system via an undersea cable, with diesel standby generators on North ...

The electricity network on North Caicos and Middle Caicos are interconnected, and the 1.2 MW system will produce 30% of the twin islands' electricity from solar energy once commissioned ...

The electricity network on North Caicos and Middle Caicos are interconnected, and the 1.2 MW system will produce 30% of the twin islands' electricity from solar energy once commissioned next year.

The twin islands of North Caicos and Middle Caicos are electrically interconnected and are powered by the Providenciales main electricity system via an undersea cable, with diesel standby generators on North Caicos as a back-up source.

FortisTCI will invest \$8 million to install the country's first solar plus battery microgrids to power 30% of the electricity supply on North and Middle Caicos and 91% of the electricity supply on Salt Cay in 2024.

Microgrid services Turks and Caicos Islands

Once completed, the microgrid will have a capacity of 1.2 megawatts and is expected to meet 30% of the energy needs for North and Middle Caicos, providing savings for customers over time as utility regulations evolve.

FortisTCI, the energy provider in the Turks and Caicos Islands, is making significant strides in constructing the country's first utility-scale solar plus battery microgrid on its property in Kew, ...

FortisTCI will invest \$8 million to install the country's first solar plus battery microgrids to power 30% of the electricity supply on North and Middle Caicos and 91% of the ...

We will continue to work with TCIG to achieve this outcome. Reducing our dependence on imported diesel fuel, expanding renewable energy integration, and lowering the cost of electricity over time are all part of the sustainable energy future we are building for the Turks and Caicos Islands."
