What is a microgrid in Puerto Rico?

A microgrid is like a miniaturized, tightly controlled version of a power grid. Each microgrid includes generation, loads, transformers, distribution lines, protective devices, and, typically, energy storage. Several factors combine to make Puerto Rico an ideal place for solar power and microgrids.

Will \$1 billion be used to build microgrids in Puerto Rico?

The US Department of Energy seeks stakeholder input on how to fast-track the distribution of \$1 billion to build microgrids and other energy resilience projects in Puerto Rico. The case for microgrids in Puerto Rico became clear five years ago when Hurricane Maria shut down its entire grid and parts of the island had no power for 11 months.

Are solar-based microgrids a viable alternative to the central grid in Puerto Rico?

Following Maria, businesses in Adjuntas struggled to obtain enough diesel and spent thousands of dollars on fuel to keep their generators operating--an expense that sorely tested them. Sunlight, though, is a free and abundant energy source in Puerto Rico, and solar-based microgrids have proven to be a reliable alternative to the central grid.

Is Puerto Rico a good place for solar power and microgrids?

Each microgrid includes generation, loads, transformers, distribution lines, protective devices, and, typically, energy storage. Several factors combine to make Puerto Rico an ideal place for solar power and microgrids. The island gets on average nearly 3,000 hours of sunshine per year, putting it on a par with Honolulu and Brisbane, Australia.

Will Puerto Rico build a hospital center microgrid?

Meanwhile, Puerto Rico's Department of Housing has issued a request for proposals for design, construction, operations and maintenance of a hospital center microgrid. Bids are due May 26 for what is expected to be the island's first hospital microgrid ( CDBG-DR-RFP-2023-01 .)

Does Casa Pueblo have a microgrid?

In 2019, in partnership with the Honnold Foundation and other organizations, Casa Pueblo started connecting the Adjuntas town square to two solar-powered microgrids. Construction was completed this past March, and the microgrids will be fully operational by the end of the year.

"I want to be put out of a job. That means the main grid power in Puerto Rico is back online." This story was written by Gerald Rogers of the U.S. Army Corps of Engineers, Los Angeles and was reposted as a public domain article. Oak Ridge National Laboratory (ORNL) is preparing to demonstrate a new microgrid orchestrator in Puerto Rico that will ensure the reliability of electrical service even if parts of the microgrid are damaged. The new tool will establish a network of microgrids that can be managed as a single cluster - creating a grid of microgrids.

The microgrid project is the latest effort in a grassroots movement to build energy security in Puerto Rico in the form of solar power. Across the island, groups like Casa Pueblo, which first opened in Adjuntas more than 40 years ago, have relied on deep roots in the community to create local buy-in and make it an equitable transition.

Power management company Eaton and Enel X have announced plans for a second joint solar-plus-storage microgrid project at the Eaton Las Piedras manufacturing facility in Puerto Rico.
