

Back Renewable energy in Monaco; Ocean thermal energy: The Principality's blue gold Solar energy: Panels on our roofs Geothermal energy: Probes in the ground to heat or cool buildings ...

In Monaco, it is possible to capture the energy of the sun in two ways: using photovoltaic panels, which transform sunlight into electricity, and with thermal panels, which use the energy ...

The Company's mission is to seek investment and development opportunities in renewable energy production projects abroad. In line with this objective, Monaco Energies Renouvelables has just acquired eight photovoltaic parks, with a total production capacity of 39 MW_{peak}, located in seven Departments in the south of France.

This website is an interactive map that allows users to easily identify every roof in Monaco, its potential solar resource, the exploitable area on which photovoltaic panels could be installed, and the possible annual electricity production. This means that residents can find out the solar capacity of their building.

In Monaco, it is possible to capture the energy of the sun in two ways: using photovoltaic panels, which transform sunlight into electricity, and with thermal panels, which use the energy produced by the sun's rays to heat water. It is primarily photovoltaic ...

The solar resource map is an interactive map available to all via the website It allows users to easily and effectively identify, for every roof in Monaco, the potential solar resource, the exploitable area on which ...

As a reminder, the solar resources web site makes it possible to identify, for each roof, the sunshine potential, the usable surface for installing solar panels, and annual energy production. This tool enables owners, managing agents and private individuals to access data quickly to help them decide whether to install solar panels on the roof ...

To best cover the Principality's consumption curve, a targeted mix of technologies has been identified by the Prince's Government, including solar, wind and hydropower. " In line with this goal, the company has recently purchased five additional photovoltaic power stations with generation capacity of 53 megawatt-peak (MW_p)," announced ...

To achieve carbon neutrality by 2050, Monaco has decided to increase the share of renewable energy, with a particular focus on the use of solar power. The Principality has access to plenty of solar resources, experiencing an average of 2,917 hours of useful sunshine every year.

The solar resource map is an interactive map available to all via the website It allows users to easily and effectively identify, for every roof in Monaco, the potential solar resource, the exploitable area on which photovoltaic panels could be installed, and possible annual electricity production.
