How do I enable off-grid mode?

On the home screen, choose Settings > Feature parameters and enable Off-grid mode. If this parameter is set to Enable, the ESS switches to the off-grid mode when the grid fails. Sets the backup power SOC. In grid-tied mode, the battery does not discharge when it is discharged to the backup power SOC.

How do I know if a battery is off-grid?

For example, if the End-of-discharge SOC parameter is set to 10% and the Backup power SOC parameter is set to 20%, the battery stops discharging when the battery SOC reaches 20%. If this parameter is set to Automatic switching, the system switches to the off-grid mode when the grid fails, and switches to the grid-tied mode when the grid recovers.

Can a hybrid inverter be used in a purely off-grid system?

Hybrid inverters are not suitable for purely off-grid systems. Attention! As the hybrid inverters are designed to be used as a grid-connected system with emergency power supply, the off-grid only performance cannot be guaranteed. The warranty is contingent on the inverter being installed as per the installation manual.

Are Sungrow hybrid inverters off-grid?

Off-grid Working Limitation of Hybrid Systems The Sungrow hybrid inverters (SH5K+ and SH5K-20) are designed for on-grid and emergency power supply (EPS) applications. With the EPS box (STB5K) connected into the PV ESS, the system is capable of operating in off-grid mode to supply power for emergency appliances only in grid-tied mode.

What happens if a grid fails?

When the grid fails, loads are powered in backup mode. The Backup power SOC parameter has a higher precedence over the End-of-discharge SOC parameter. For example, if the End-of-discharge SOC parameter is set to 10% and the Backup power SOC parameter is set to 20%, the battery stops discharging when the battery SOC reaches 20%.

How do I enable microgrid compatibility in smartlogger WebUI?

On the SmartLogger WebUI, choose Monitoring > Inverter > Running Param. > Feature Parameters and set Microgrid compatibility to Enable. The MGCC sends a command to set Working mode from PQ to VSG under Monitoring > PCS > Running Param. > Feature Parameters. The MGCC sends a command to switch the system from on-grid to off-grid state.

Auto: The on/off-grid switching will be performed automatically based on the status of the mains power. When you set On/Off-grid switching mode to this mode, an immediate on/off-grid switching may be triggered, depending on the status of the mains power. **Manual:** You need to manually turn on or off the on/off-grid switch at the grid connection ...

The grid-tied and off-grid ESS switches the inverter to the grid connection status through the Backup Box. When the grid fails, the ESS supplies power to primary loads in backup mode. When the grid recovers, the ESS automatically switches back to the grid-tied mode. This mode can be used together with the self-consumption or TOU (time-of-use) mode.

The Sungrow hybrid inverters (SH5K+ and SH5K-20) are designed for on-grid and emergency power supply (EPS) applications. With the EPS box (STB5K) connected into the PV ESS, the system is capable of operating in off-grid mode to supply power for emergency appliances only in the event of a grid interruption or blackout.

On the home screen, choose Set > Feature parameters and enable Off-grid mode. SmartGuard must be selected when the system is powered on for the first time in off-grid mode. Otherwise, the system will not work.
