

# Norfolk Island solar plate rate

Does Norfolk Island have too much solar energy?

That's pretty impressive given its remoteness and a population of 1,849. But this uptake has also caused some headaches in managing Norfolk Island's electricity network, with too much solar energy goodness generated at times. The Tesla battery system installed in December 2020 has helped out on that front.

How many solar panels are there in Norfolk Island?

44 km of high and 44 km of low voltage cabling. Distributed household rooftop PV systems. There have been more than 555 small-scale solar power systems installed on Norfolk Island, with a collective capacity of 1,770 kW. That's pretty impressive given its remoteness and a population of 1,849.

What is the electricity supply on Norfolk Island?

charge for the connection of the supply and consumption of electricity. The current Energy supply on Norfolk Island consists of: 1.4 MW distributed household rooftop PV owned by members of the community. The Islands distribution network includes: 44km of high and 44km of low voltage cabling of which approximately 50% is underground.

When will a new meter be installed in Norfolk?

Replacement of the island's legacy electricity meters with time of use meters began in September 2023. It is anticipated that the rollout of all new meters will take approximately six months. Council's contracted installers notify Norfolk Telecom customers by SMS weekly on the planned meter installation route for the upcoming week.

Will Australian government help Norfolk Island's diesel-based electricity cost woes?

The Australian Federal Government has stepped in to give the folks on Norfolk Island some relief from their diesel-based electricity generation cost woes. Norfolk Island is a tiny island (3,455 hectares) in the South Pacific Ocean.

Will Norfolk be 100% renewable by 2024?

Norfolk Regional Council has set its sights on 100% renewables by 2024, introducing feed-in tariffs and reducing the highest consumption tariff of \$0.72 per kilowatt-hour by at least half by that year. Michael caught the solar power bug after purchasing components to cobble together a small off-grid PV system in 2008.
