

Can Palestinians achieve 10 percent of electricity production from renewable sources?

The Palestinian Energy Authority issued a renewable energy strategy in 2012 that aims to gradually achieve 10 percent of electricity production from renewable sources by the end of 2020. According to the strategy, this goal can be achieved if certain prerequisites are attained.

How much energy does Palestine need?

Palestinian energy demand increased rapidly, increasing by 6.4% annually between 1999 and 2005. Future consumption of electricity is expected to reach 8,400 GWh by 2020 on the expectation that consumption will increase by 6% annually.

Can solar energy be used for different applications in Palestine?

These values are encouraging to exploit the solar energy for different applications. This study highlights that the main renewable energy sources in Palestine are solar energy, wind energy and biomass, thereby the energy dependence on neighbouring countries may significantly decrease, when Palestine uses the available renewable energy sources.

Does Palestine have a potential for solar power?

The Palestinian territory has a high potential for solar power generation, as it receives around 3,000 hours of sunshine per year. As a result, the Palestinian Authority is looking to attract investments in the renewable energy sector. Inauguration of the solar power plant in a school in Beit Hanina, Jerusalem.

How to reduce energy consumption in Palestine?

Recently, after the evolution of increasing oil prices, energy has become another major challenge to sustainable development for Palestinian. Thus, the other main goal to achieve is to reduce the energy consumption in Palestine, these can be done by the development of a clear energy conservation and regulation policy.

Who owns the Palestinian Electric Company?

The Palestinian Electric Company was established in 1999, with 33% of its assets for public shareholders and 67% for private shareholders and with cost of USD 60 million. The IEC is considered the monopoly of electricity production in West Bank with a main production capacity of more 10 GW.

It takes into account the new agreements with Israel regarding the transfer of energy distribution sector to the Palestinian government; the government plans to exploit and ...

Renewable energy is not only a viable economic choice in Palestine, but it is also an imperative requirement to end the country's current energy crisis, which is particularly acute in the West Bank and Gaza Strip.
