How much do portable solar panels cost?

Portable solar panels are less expensive than standard mounted solar panels. Most portable solar panels cost under £500, whereas fixed solar panels cost an average of £703 up front. And since the typical three-bedroom house in the UK needs about 10 panels in its solar system, it typically ends up costing homeowners a total of £7,026.

Are portable solar panels worth it?

Sure, portable solar panels lack the oomph to power an entire home's electricity needs - traditional roof-mounted (or even ground-mounted) solar panels are best for that purpose - but as a guilt-free way of generating renewable energy, portable solar panels will be an excellent addition to your next excursion.

How much does a solar panel cost?

The solar panel cost is tied to their power output and efficiency, with more powerful, more efficient panels costing more. In the UK, for instance, a 60W portable solar panel can cost as little as £160, while a 160W panel will be closer to £250, and a 220W panel will cost around £350.

Can solar panels save you money?

As sunlight is a free resource, a typical solar panel system can save you around 50-70% on your electricity bills. Plus, you can actually make money from your solar panels. When your panels generate more electricity than your household can use, this excess electricity can be exported to the grid to be used by others.

How much does a 400W solar panel cost in the UK?

At the upper end of the scale, a 400W portable solar panel currently costs around £670 in the UK. Flexible portable solar panels tend to have lower power outputs and efficiency ratings than their rigid portable counterparts, so they're also the cheaper solar panel option.

How do I choose a portable solar panel?

When choosing a portable solar panel, it's a good idea to look at its efficiency rating - the best panels are over 20% efficient. You should also note the warranty period - typically 10 years - which is a guarantee of how long your solar panel will operate at maximum efficiency. How efficient are portable solar panels?
