

How do APsystems microinverters work?

No matter where you are. Unlike central inverters with high DC voltages in the hundreds of volts, APsystems microinverters tie directly to the low-voltage PV module and connect to the public power grid via standard AC voltages - enhancing worker and homeowner safety, and eliminating the possibility of high-voltage DC "arc" fires.

Can I Disconnect the PV module from the APsystems microinverter?

Do NOT disconnect the PV module from the APsystems Microinverter without first disconnecting the AC power. Be aware that the body of the APsystems Microinverter is the heat sink and can reach a temperature of 80°C. To reduce risk of burns, do not touch the body of the Microinverter. Do NOT attempt to repair the APsystems Microinverter.

Can APsystems microinverters cause a fire?

This extreme high DC voltage brings a risk of electrical shocks or electrical arcs which could cause fire. When using an APsystems microinverter, PV modules are connected in parallel. Voltage at the back of each PV module never exceeds PV modules Voc, which is lower than 60 Vdc for most of PV modules used with APsystems microinverters.

Which PV modules are compatible with APsystems microinverters?

APsystems Microinverters are compatible with most of 60 and 72 cell PV modules or 120 and 144 half-cut cells PV modules. (In order to confirm compatibility of PV module with APsystems microinverter, feel free to check our online "E-decider" module compatibility tool or contact your local APsystems Technical Support).

What is a 3 phase microinverter?

China-based inverter manufacturer APsystems has launched a three-phase microinverter for residential and commercial PV projects, with a power output of up to 2,000 VA. "Our microinverter is equipped with reactive power control that makes it interactive with power grids," Olivier Jacques, president global for APsystems, told pv magazine.

Can APsystems microinverters be installed in a balanced 3-phase system?

Possible to install in a balanced 3-phase system A PV system using APsystems Microinverters is simple to install. Each Microinverter easily mounts on the PV racking, directly beneath the PV module(s). Low voltage DC wires connect from the PV module directly to the Microinverter, eliminating the risk of high DC voltage.
