

# Photovoltaic panel stocks plummeted

Why are photovoltaic module prices falling?

One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached? Apparently, there is still room for further drops, as all prices have fallen again this month.

Are photovoltaic panel prices falling?

Never before in the history of photovoltaics have panel prices plummeted so significantly in such a short space of time. For a month or two now, the values have been below the previous all-time low of 2020 and even more so below the production costs of most manufacturers.

Why have solar module prices fallen so sharply?

Solar module prices have never fallen so sharply in such a short period of time. One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached?

Why are solar panels so expensive in 2023?

AP Photo/Joshua A. Bickel The US and European Union are seeing solar panels pile up amid a massive oversupply, the IEA says. This has slashed prices by nearly half in 2023, and prices are set to continue dropping. "Manufacturers are focusing on cost-cutting and innovation," the International Energy Agency wrote.

Why are photovoltaic prices dropping so much?

The wave of devaluation is also just beginning, which is why the price drop is becoming more severe from month to month. Many still hope to get away with a black eye. But the risk of being stuck with the old goods is very high. Those interested in photovoltaics also monitor prices very closely and compare offers.

Why are solar module prices so low in Europe?
