What is tube punching?

Tube punching is the process of making a hole in a tube with a die supported by a mandrel. This photo illustrates a hole that is uniform with minimal distortion. (Tube "piercing" is the process of making a hole with a punch but without a die or die support. The resulting hole is dimpled.)

What is a mandrel style hole punching unit?

For dimple-free holes in tube or pipe, UniPunch provides custom mandrel style hole punching units. Mandrel punching units are offered for producing round or shaped holes in single or multiple hole configurations in round, square or rectangle tubing or pipe.

What is torque tube punching?

Torque tube punching is a process that involves punching a hole in a tube using a die supported by a mandrel. Although the precision of machining is less than that of hole drilling, it is more cost-effective and productive. A mandrel is inserted and positioned beneath the punch, which is then pressed against the workpiece by applying pressure.

Torque tube punching is a process that involves punching a hole in a tube using a die supported by a mandrel. Although the precision of machining is less than that of hole drilling, it is more cost-effective and productive. A mandrel is inserted ...
