Members of the California Plug Load Research Center (CalPlug) provide insights on their plug and process loads research focus areas that affect commercial building efficiency: plug load appliances and devices in use, consumer behavior studies, energy conservation in server rooms, and benchmarking energy efficiency prototypes and products.

Upgrade your power management with the Plugload PL07 - a cutting-edge black power strip designed to meet all your electrical needs. This smart power strip boasts an impressive 7 outlets, providing plenty of room for all your devices.

Plug load management systems are touted as promising solutions to reduce the rising energy consumption of plug loads in commercial buildings through different load monitoring and control strategies.

Plug load is the energy used by products that are powered by means of an ordinary AC plug (e.g., 100, 115, or

230 V). [1] This term generally excludes building energy that is attributed to major end uses (HVAC, lighting, water heating, etc.) [1] Definitions.

Even though building managers appreciate the value of these plug load solutions, the cost benefits and ROI play a crucial role for commercialization of the solution. These challenges are addressed in the next sections.
