

Power works Kenya

Which energy sources are used in Kenya?

Renewable Sources: Over 80% of Kenya's electricity is generated from renewable/clean energy sources. Of these, geothermal remains the most significant source with an estimated potential of 10,000MW, but it remains relatively unexploited with a current installed capacity of less than 863MW.

Does Kenya have solar power?

Kenya has a high potential for solar power given the high irradiation levels available throughout the year. Kenya added 120MW of solar power to the grid in 2021, raising the total generation to 172MW. There are various other solar projects in different stages that are envisioned to come online from 2023.

What is Kenya's energy sector like?

The sector presents opportunities for trade and investment, especially in renewable sources like geothermal, solar, and wind. Around a third of Kenya's installed capacity is owned and operated by IPPs across several plants, including small-scale hydro plants, geothermal, biomass, wind, solar, and heavy fuel oil plants.

Women experiencing poverty who are under-trained, under-banked and under-financed are finding access to training and capital. Harnessing their untapped potential is good for women, families and entire communities.
