For more information, check out our guide to home battery storage without solar in the UK. Can you add a solar battery to an existing solar panel system?

Can I add a solar battery to an existing solar panel system?

You can add a solar battery to an existing solar panel system. However, it'll usually cost more than having a battery installed at the same time as your panels. For example, you'll pay about £5,000 to add a 5kWh battery to an existing system - or just £2,000 if you get the entire solar & battery system in the same installation process.

Do solar panels need a battery bank?

The higher your battery's capacity, the more solar energy it can store. In order to use batteries as part of your solar installation, you need solar panels, a charge controller, and an inverter. Properly sizing your battery bank is a crucial step to creating an efficient and powerful system.

Can I still use electricity during a solar battery installation?

You can typically continue using electricity at home during a solar battery installation. The process primarily involves connecting and configuring the solar battery system via your solar inverter, which rarely requires disconnecting your existing power source.

How do I choose the right solar battery?

One of the most important parts of choosing the right battery is to select an appropriately sized machine for your solar panel system and home. The size of a solar battery is measured in kWh instead of kW, because they store energy rather than creating it.
