

Are rivus batteries safe?

Low-cost. Safe. Metal-free. Rivus Batteries offers truly green batteries for stationary energy storage applications through organic flow batteries.

What are rivus batteries?

Rivus batteries are part of the solution to achieve a more flexible energy system with fewer emissions and a reliable supply of power. Low environmental footprint compared to metal-based batteries

What are rivus organic flow batteries?

Rivus' organic flow batteries use organic molecules instead of critical metals like lithium and vanadium. Their technology has been demonstrated on a small scale and at the end of the year a pilot will be installed at HSB Living Lab together with Bengt Dahlgren AB, a Sweden-based engineering firm with 700 employees.

What is rivus energy storage technology?

Rivus energy storage technology can optimise energy usage while minimising environmental harm. Battery storage systems are emerging as one of the key solutions to effectively integrate high shares of solar and wind renewables in power systems worldwide

How long do rivus batteries last?

Despite the ongoing global economic headwinds, Rivus' CEO Cedrik Wiberg is optimistic for the future. - We aim to prove to investors that that our batteries have a long lifespan, between 15 and 20 years, and then scale up quickly.

Who is rivus?

Rivus is a climate tech start-up on a mission to enable ultra low-cost and eco-friendly grid-scale energy storage. Led by a team of dedicated chemists, battery experts and entrepreneurs our aim is to fundamentally transform how energy is stored, supporting the global energy transition away from fossil fuels.

Rivus Batteries is pioneering sustainable energy storage with its innovative, metal-free flow battery technology utilizing water-based organic electrolytes. The company focuses on reducing costs and environmental impact, offering a greener ...

Redox flow batteries are an attractive way to store energy from intermittent sources, such as solar and wind because of their simplicity and the potential to scale them up ...

Rivus Batteries operates in the increasingly important field of energy storage, focusing specifically on stationary applications with Organic Flow Batteries. Its approach aims to offer a more sustainable and cost-effective alternative to ...

Once the metals are extracted from the country of origin, they are transported into China for battery manufacturing and then shipped worldwide for consumption, with each stage resulting in CO₂ emissions. Rivus uses a molecule extracted from organic materials.

Redox flow batteries are an attractive way to store energy from intermittent sources, such as solar and wind because of their simplicity and the potential to scale them up easily. In a flow battery, electrochemical energy is stored on soluble molecules, housed in spatially separated storage tanks.

Rivus Batteries operates in the increasingly important field of energy storage, focusing specifically on stationary applications with Organic Flow Batteries. Its approach aims to offer a more ...

Large-scale batteries are urgently needed to store renewable energy - it's not always windy and sunny when we need it to be. Rivus' vision is to add a critical element to the global energy transition away from fossil fuels to predominantly renewable energy.

Rivus Batteries operates in the increasingly important field of energy storage, focusing specifically on stationary applications with Organic Flow Batteries. Its approach aims to offer a more sustainable and cost-effective alternative to traditional energy storage technologies.

Once the metals are extracted from the country of origin, they are transported into China for battery manufacturing and then shipped worldwide for consumption, with each stage resulting in CO₂ emissions. Rivus uses a molecule extracted ...
