

What is the energy potential of Saint Lucia?

Saint Lucia is a volcanic windward island, with large technical potential for geothermal, wind, and solar renewable energy generation, as well as use of solid waste generated by residents. Little technical potential for biomass or hydroelectric generation exists on the island.

Does Saint Lucia have a good electricity system?

The Government of Saint Lucia believes a well-functioning electricity system underpins a strong national economy, and is committed to ensuring that all citizens have safe, reliable, and cost-effective access to electricity. For decades, Saint Lucians have benefitted from a reliable power supply, but at a cost.

Is Saint Lucia reliant on fossil fuels for electricity generation?

Like many island nations, Saint Lucia is almost 100% reliant on imported fossil fuels for electricity generation, leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity. Electricity Sector Data

Are there challenges to Saint Lucia's Electricity System?

Challenges to Saint Lucia's electricity system do exist. Saint Lucia's infrastructure is vulnerable to extreme weather events; there are critical points of failure that could leave Saint Lucia without power for days due to high wind and/or flooding events, though historically LUCELEC has reestablished power quickly. In the worst

Does Saint Lucia need a power supply?

For decades, Saint Lucians have benefitted from a reliable power supply, but at a cost. Our reliance on imported fossil fuels for the generation of electricity has left our small island nation vulnerable to external shocks, due to fluctuations in global oil prices over which we have no control.

What are Saint Lucia's energy goals?

In 2014, the Government of Saint Lucia announced refined energy targets, setting a renewable energy penetration target of 35 per cent and an energy efficiency target of 20 per cent reduction in consumption in the public sector, both to be achieved by 2020.

The plan will help to reduce energy costs for citizens of Saint Lucia which, like most island nations, suffers from astronomically high electricity costs that hinder economic development. As a small island developing state, Saint Lucia is particularly vulnerable to the impacts of climate change. Although the island only emits 0.0015% of global ...

OF THE MINISTER FOR THE PUBLIC SERVICE ...

The updated National Energy Policy for the period 2023-30 and its accompanying implementation plan represent a significant milestone in Saint Lucia's journey toward a more sustainable, resilient, and prosperous future.

In keeping with its 2035 Strategic Business Plan, the St. Lucia Electricity Services Limited (LUCELEC) has launched ENERGYZE Holding Inc (ENERGYZE), a new subsidiary charged with the mandate to pursue diversification opportunities including new energy solutions, in keeping with the rapidly changing energy sector.

To become the leader by providing high quality and cost-effective complete Renewable Energy and Energy Management systems and solutions that will provide energy security, reliability, and dependability, off and on the grid, competitive electric power to St Lucia and the region.

Developing solutions to assist in meeting or exceeding green energy needs. ... St Lucia has a high solar potential and set a renewable energy mix target of 35% by 2020. Presently St Lucia energy mix is comprised of just 1% renewable energy on the public grid. Its electrical demand peaks at 61MW and its electricity prices are high relative to ...

Saint Lucia is boldly playing its part in tackling the global climate crisis by pursuing greener and cleaner energy solutions. From August to December 2023, the government installed more than 14,000 light emitting diode (LED) bulbs around the island. Nearly 17,000 LED bulbs will be installed by the end of March 2024.

This document presents St. Lucia's Energy Report Card (ERC) for 2020. The ERC provides an overview of the energy sector performance in St. Lucia. The ERC also includes energy efficiency, technical assistance, workforce, training, and capacity building information, subject to the availability of data.

Exploring the Potential of Renewable Energy Sources in Saint Lucia's Energy Market. Saint Lucia, a small island nation in the Eastern Caribbean, has been making significant strides in its quest to transition from a fossil fuel-dependent economy to one that is powered by renewable energy sources.

Saint Lucia's energy landscape presents a clear picture of fossil fuel dependence, with the island consuming over 20.7 million imperial gallons of diesel for electricity generation alone in 2022. The island nation's electricity system, operated by Saint Lucia Electricity Services Limited (LUCELEC), maintains an installed generating capacity ...

saint lucia aims to ensure a secure, reliable, greener, and more resilient energy scetor. The updated National Energy Policy for the period 2023-30 and its accompanying implementation plan represent a significant milestone in Saint Lucia's journey toward a more sustainable, resilient, and prosperous future.
