What is a home battery backup system?

Home battery backup systems are large, rechargeable batteries designed to power your home during electrical outages. They can charge through the electrical grid or, more commonly, through solar panels installed on your property.

Is a whole home battery backup system worth it?

You'll need about three times as much power for a whole home backup system, which is about three times the price of a partial home setup. Partial home battery backup systems generally make more sense for the average American home, but a whole-home setup may be worth it if you live in an area with frequent blackouts.

What are the benefits of a home battery backup system?

Home battery backup systems offer several attractive benefits many homeowners can appreciate. With a battery backup system, you can achieve a high degree of energy independence. This means less reliance on the grid and protection against rising electricity costs.

Are home batteries a good alternative to traditional backup systems?

As an advanced alternative to traditional backup systems, like gas and diesel generators, home batteries can increase your home's energy independence in routine times and during emergencies. Having your own energy storage can decrease your property's electricity costs and carbon emissions.

How many kWh does a battery backup system store?

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.
