

What is a load shedding solution?

The load-shedding solution ensures a swift disconnection of low-priority loads after detection of a power network disturbance. It is designed to utilize the full potential of the IEC 61850 standard for communication and interoperability of substation automation devices.

What equipment can be included in a low voltage load shedding solution?

A dedicated low-voltage load-shedding solution based on Emax2, Ekip Control+, motor controllers and MCBs is also possible. Additional equipment like transducers, auxiliary relays etc. can be included as per project requirements. Benefits

Does Saudi Arabia need a modernized power grid?

Similar to the numerous challenges encountered globally in the process of smart grid transformation, the traditional power grid in Saudi Arabia faces challenges such as transmission losses, low efficiency, and limited ability to accommodate RESs. Therefore, there is a need for a modernized power grid.

Why do we need smart grid technologies in Saudi Arabia?

Therefore, motivation and promotion of smart grid technologies is needed for the customers to buy into the ideas of the advanced energy management structures. Solar and wind energy sources are the two prominent renewable energy technologies projected to be installed in Saudi Arabia.

Is Saudi implementing a net metering programme?

Saudi has recently declared the implementation of a net-metering programme with its current feed-in-tariffs enacting 0.019 \$/W and 0.013 \$/W for residential and commercial sectors.

**Cost-effective:** Compared to generators, an inverter system is often less expensive and requires less maintenance, making it an affordable backup power solution.; **Clean energy:** By using solar panels or a wind turbine as the energy ...

**Ongoing fuel costs:** With load shedding becoming a frequent occurrence, hotels must factor in the continuous expenditure on fuel to generate electricity. This added operational cost can quickly accumulate, especially during extended periods of load shedding, putting additional pressure on hotel budgets. 3.

The load-shedding application presented in this paper involves a large petrochemical facility. The load-shedding system covers two process plants, one newly constructed and one existing, ...

A dedicated load shedding solution for power distribution networks. Intelligent Distribution Load Shedding (iDLS) solution is an integrated model-driven controller with real-time operational digital twins to validate,
