The installation of Samoa's 546kWp solar PV grid-connected system is expected to provide significant benefits to the government of Samoa by reducing the use of diesel by around 190,000 litres p.a and realizing costs savings of approximately SAT570,000 per annum in a country which generates 60% of its electricity from diesel.

**How Solar Panels Work.** Solar panels work by converting sunlight into electricity through photovoltaic cells. These cells are made of semiconductor materials like silicon, which absorb photons from sunlight. When sunlight hits the cells, it knocks electrons loose from their atoms, creating an electric current.
