

Why is Nauru so vulnerable to solar energy?

Solar energy is the only proven renewable energy resource which could be utilised in short to medium term to reduce dependency on fuel imports for electricity generation. The country's vulnerability is also increased by its isolation from other Pacific Islands. In 2012, SPC released an energy profile of Nauru based on 36 energy security indicators.

Does Nauru have an energy road map?

Currently Nauru is working on an Energy Road Map, including action plans for the development of renewable energy and energy efficiency sufficient to significantly lower imports of diesel fuel for electricity generation.

What type of energy is used in Nauru?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Nauru: How much of the country's energy comes from nuclear power?

How can Nauru reduce its reliance on fossil fuels?

In order to achieve Nauru's ambitious goal of reducing the country's high reliance on imported fossil fuel by meeting 50% of its energy needs from renewable energy sources by 2015,¹ the Nauru Government requested technical support from GIZ, SPC and IRENA in the development of a Nauru Energy Road Map in early 2012.

How did Nauru get its electricity & water services?

Until 2005, the Nauru Phosphate Corporation provided all the island's electricity and water services. In 2005 the Nauru Utility Authority (NUA) was formed to separate the water and electricity utilities function from the phosphate corporation. It was later decided to corporatize NUA and the Nauru Utilities Corporation (NUC) was created.

Does the NUC provide electricity to Nauru?

The NUC currently provides all electricity services to Nauru except for the RPC and the main processing plant of RONPHOS which both generate their own power. Diesel, petrol and jet fuel are purchased by the government for all customers except RONPHOS who do their own purchasing.

Energy sector landscape covering supply and demand and institutional arrangements; Experience, potential and challenges in the use of renewable energy and energy efficiency; and, Data needs for the energy road map and beyond.

Sinenergy earnestly works towards the adoption of Solar power for environment protection. We are among the market leaders in development & implementation of Solar power projects across Southeast Asia.

provide a guideline for the development of the energy sector of Nauru. The policy framework was adopted in 2009 with the vision of providing reliable, affordable and sustainable energy for enabling the socio-economic development of Nauru. It includes a target to supply 50% of the total energy use in Nauru from renewable sources by 2015.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Solar energy is changing the world. Be a part of the change. For specialists who want to realise their solar dream, we might have an exciting opportunity for you. We value our people and the expertise they bring with them! Interested candidates can browse through the openings below. We'd love to hear from you.
