What is skeleton's superbattery?

Skeleton's SuperBattery fills the technology gap between supercapacitors and batteries, offering the ideal combination of energy, power, and safety for <45-minute applications. SuperBattery is bringing us closer to a net-zero future. SuperBattery is an innovative technology combining the characteristics of supercapacitors and batteries.

Is skeleton's superbattery the new EV super-fast charging technology?

Skeleton's Superbattery might not be the killer technology that gives your new EV super-fast charging times and a near-infinite lifespan, but it looks like it'll be a significant step forward in the less-glamorous niche of board net and peak smoothing applications, where it can deliver some impressive advantages.

Will skeleton's graphene-based Battery Bridge the energy gap?

Skeleton signed a EUR1bn letter of intent with a leading automotive manufacturer to bring the technology to market. Skeleton's graphene-based battery is hoping to help bridge the gap where lithium-ion batteries or hydrogen fuel cells are still not quite meeting energy requirements.

Who are shell & skeleton?

The nine-member consortium, including Skeleton and Shell, has come together to introduce Shell's Mining Electrification Solutions for Off-Road Vehicles - announced in May 2022 as one of the 8 winners of the mining industry's 'Charge On Innovation Challenge', from over 350 entries.

Is skeleton a hybrid battery/capacitor system?

Skeleton got in touch to say no, this is not a hybrid battery/capacitor system, it's "a completely novel energy storage technology on a cell level" and offered us the chance to chat with Dr. Sebastian Pohlmann, the company's VP of innovation.

Does skeleton have a curved graphene battery?

Skeleton's patented Curved Graphene material allows for 100 x faster charging compared to standard Lithium-ion batteries. Used in off-road vehicles, SuperBattery can be charged in less than a minute, therefore requiring much less charging time spent per day: less than an hour, whereas 6.5 hours are needed with a lithium-ion battery.

Skeleton's graphene-based battery is hoping to help bridge the gap where lithium-ion batteries or hydrogen fuel cells are still not quite meeting energy requirements. The company is today announcing a partnership with Karlsruhe Institute of Technology to complete the development.

Skeleton's graphene-based battery is hoping to help bridge the gap where lithium-ion batteries or hydrogen fuel cells are still not quite meeting energy requirements. The company is today announcing a partnership with

Karlsruhe ...

Skeleton Technologies, a developer of curved graphene-based supercapacitor and battery energy storage, officially launched its SuperBattery (earlier post), and announced Shell as a partner. Skeleton is joining a Shell ...

We have tested all the leading suppliers on the market and are convinced that Skeleton Technologies has by far the best offer. The lowest internal resistance (ESR) and highest efficiency levels of Skeleton's ultracapacitors lets us explore new ...

Skeleton Technologies, a developer of curved graphene-based supercapacitor and battery energy storage, officially launched its SuperBattery (earlier post), and announced Shell as a partner. Skeleton is joining a Shell-led consortium to offer electrification solutions for ...

Overview Industries and applications About History Technology Financing Skeleton produces supercapacitors to improve fuel efficiency and support power storage and discharge in electric vehicles. In automotive applications, supercapacitors can be connected in parallel with batteries to increase both energy density and power density and improve the longevity of the energy storage system. Skeleton offers supercapacitor-based energy storage systems for wind power applications, whic...

Skeleton's current first-generation product offering is high-end ultracapacitors. According to Pohlmann, the company makes the most power-dense ultracaps available on the market today.

Skeleton Technologies is preparing to produce "super batteries" that can be charged in 30 seconds with the "curved graphene" it has developed. The company has raised 108 million euros in the latest investment round by Siemens.
