What is a small solar panel?

Small solar panels in the range of 50W to 200W are ideal for off-grid applications. These compact, lightweight panels are easier to install and transport and can sufficiently meet the lower energy demands of RVs, boats, tiny homes, and remote explorers. Some standard small solar panel sizes include:

Which solar panels should I buy?

For small-scale systems, 12V or 24V is what you want, especially to start with. You can also find small solar panels with voltages below 12V. People often ask which solar panels to buy, but there is little advice to give. You have a choice between mono- and polycrystalline solar panels.

What voltage do solar panels come in?

Solar panels come in different voltages, usually 12V or 24V, sometimes 36V, 48V, or higher for grid-tied systems. For small-scale systems, 12V or 24V is what you want, especially to start with. You can also find small solar panels with voltages below 12V. People often ask which solar panels to buy, but there is little advice to give.
