

Creating smart grid solutions in the Netherlands that can be scalable worldwide. The energy transition, the fast pace of electrification and the increasingly distributed production and feed-in of power, are posing steep challenges to the energy system in the Netherlands and in the rest of the world.

PowerMatching City -- a live smart grid project involving 25 households in the Hoogkerk district in the northern part of the Netherlands -- has demonstrated that it is possible ...

In response, the Netherlands is inviting international companies to develop and scale smart grid technologies within the Dutch ecosystem, thereby powering solutions that can be used worldwide.

In response, the Netherlands is inviting international companies to develop and scale smart grid technologies within the Dutch ecosystem, thereby powering solutions that can be used worldwide. Tapping into the country's advanced infrastructure and culture of innovation, businesses are well-positioned to devise energy storage solutions and ...

The Netherlands is pursuing solutions to make energy grids smarter, more sustainable and more resilient, as part of the country's efforts to accelerate the global energy transition.

In this blog, we explore some interesting smart grid initiatives in the Netherlands, with a special focus on how they are impacting the world of electric driving. What are smart grids? A smart grid is an electricity network that uses digital technology to monitor, manage and optimize the flow of electrical energy.

Grid operator Enexis Netbeheer, based in the Netherlands, is building an Internet of Things-inspired smart grid and has 900,000 connected smart electricity meters already, with more planned. But deployment of this many connected devices needs ...

Creating smart grid solutions in the Netherlands that can be scalable worldwide. The energy transition, the fast pace of electrification and the increasingly distributed production and feed-in of power, are posing steep ...

Pioneering Dutch and international smart grid startups are also key players in the Dutch energy ecosystem, such as Ammp, which provides digital solutions for distributed energy. Their SaaS platform offers remote ...

New York's Consolidated Edison has invested \$2.3 billion on infrastructure projects across New York City and Westchester County. ... consortium under the management of EPRI has launched to accelerate the ...

In Europe, a new pilot study has revealed that the Netherlands can save up to EUR3.5 million by deploying smart grid technology. The pilot called "PowerMatching City" is a living lab smart grid demonstration
