

Does social context affect the effectiveness of a community microgrid?

It is clear that the social context of a community can greatly impact the effectiveness of a community microgrid, yet current research often focuses on individual social factors rather than taking a comprehensive view of the community's social fabric.

How does social capital affect Community Microgrids?

Social capital, including its dimensions such as structural, cognitive, and relational capital forms the foundation of the framework and serves to evaluate the community capability and determine its type, which in turn affects its impact on the community microgrid.

What are the objectives of a community microgrid?

The objectives of a community are shaped by the unique social and cultural context in which it operates. This means that different community microgrids may have different goals and priorities based on the specific needs and values of the community.

Does the social fabric of a community influence microgrid adoption and success?

Through an analysis of previous research (Section 3) and an examination of SCT (4 Social capital theory, 5 Applying social capital theory to community microgrids), we have concluded that the social fabric of a community plays a significant role in determining the adoption and success of these microgrids.

Why do different Community Microgrids have different goals and priorities?

This means that different community microgrids may have different goals and priorities based on the specific needs and values of the community. For example, a community microgrid in a rural area may have different objectives than a community in an urban setting [12,20].

What is an example of a community microgrid?

For example, a community microgrid in a rural area may have different objectives than a community in an urban setting [12,20]. The rural community may prioritise energy independence and self-sufficiency, while the urban community may focus on reducing greenhouse gas emissions or increasing access to affordable energy.
