

# Solar Street Light Adjustable Bracket Installation

How to install solar panels & brackets?

Assembly of solar panels and brackets: Align the installation holes of the solar panels and brackets and tighten the screws. Pre-assembly of batteries: Place the batteries in the battery box, install the sealing ring, and thread the battery wires from the top cover wire outlet. Cover the top cover, align it with the holes, and tighten the screws.

How do I choose the best solar street lights?

Selecting the right site is critical for the performance of solar street lights. Factors to consider include: Sunlight Exposure: Ensure the location receives ample sunlight. Obstructions: Avoid areas with trees or buildings that may block sunlight. Safety: Choose a site that minimizes the risk of vandalism or damage. Lighting Requirements

What are solar street lights?

Solar street lights have revolutionized outdoor lighting by harnessing solar energy to power LED lights. They offer an eco-friendly, cost-effective solution for illuminating streets, highways, parks, and other public areas.

How do solar street lights work?

Components of Solar Street Lights Solar Panels: The heart of the solar street light system, solar panels capture sunlight and convert it into electrical energy. Batteries: Store the energy generated by the solar panels to power the LED lights during the night. LED Lights: Energy-efficient lights that provide bright illumination.

How do I choose a solar light pole?

Selecting a pole - It should be a tapered pole with 50~60mm spigot size. Needs to be of sufficient strength to handle the weight and sail size of the solar light used. May want to consider frangible poles depending on requirements. Tilt poles might help with installation. Refer local requirements regarding wind and corrosion.

Where should a solar light be installed?

To maximise exposure to the sun, solar panels must be installed to tilt north in the southern hemisphere and south in the northern hemisphere. The Solar Light should not be installed in a location that blocks sun exposure by buildings or trees. See Section 2.4 for more detail. Selecting a pole - It should be a tapered pole with 50~60mm spigot size.
