

Solar panel evaluation Svalbard and Jan Mayen

Why do solar panels work in Isfjord Radio?

The solar panels also benefit from the "albedo" effect, the reflective power of snow and ice, as well as low temperatures that improve their efficiency. On the flipside, the region is plunged into total darkness from early October until mid-February, which makes it impossible for Isfjord Radio to completely give up fossil fuels.

Could a new solar project help remote Arctic communities transition to green energy?

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote Arctic communities transition to green energy.

How polar climate affect bifacial solar power production?

The Polar climate has several favourable characteristics for solar power production, namely the effect of increased solar cell voltage with decreasing temperature, and high-albedo providing significant amounts of ground-reflected irradiance which can be utilized by bifacial solar panels (Frimannslund et al., 2021).

Where are the world's northernmost solar panels installed?

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, despite the region being plunged into darkness from early October until mid-February every year. Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter.
