How do I connect my solar panels to my auxiliary battery?

You can connect your solar panels directly to your auxiliary battery. This is the simplest system but it's quite a poor arrangement. There is potential to overcharge and damage your battery. A solar panel will continue to charge to its open circuit voltage, which is usually around 17V for panels used in 12V systems.

Can auxiliary battery be charged with alternator?

So the system can be arranged with either two standard voltage sensing relays or one dual voltage sensing relay. The charging system (solar panels) is not included in the schematic. They are treated separately in the solar panels section. DC-DC Converter Charging your auxiliary battery with your vehicle's alternator is good but not great.

Can you plug solar panels directly to a 12V battery?

I'd suggest do some more reading.. Firstly you can NOT plug 12v solar panels directly to a 12v battery EVER (with the exception of a extreme emergency to start your car). It is extremely dangerous and will kill your battery in a matter of days or even hours if the solar power is high. That is if you don't blow it up and put your self in hospital..

Why do you need a solar plug?

It's handy to connect your solar panels, lights etc via plugs. It's extra work and doubles the amount of terminations, but it means you can easily remove them when you've finished your camping trip or if you have a problem with the equipment or its mounting system.
