Can a diesel generator power a tower crane?

"Diesel generators have a very poor efficiency when supplying energy to tower cranes," he says. "They require frequent maintenance as well as a regular supply of diesel which requires organisation and attention from construction site managers. These tasks can be avoided when using a battery system.

Can a tower crane run on electricity?

Most modern tower cranes have been manufactured to run on electricity since the 1970s. And yet, their high power demand often makes it difficult for contractors to connect them directly to the national grid, even if there is a connection available.

How do cranes work?

"Often on a construction site there is no connection to the national grid, so cranes are powered by generator sets," Knichel says. "When they lift heavy loads there is a big power spike and our system injects energy at high power to cover these power spikes.

Are alternative solutions for powering tower cranes becoming a big business?

As contractors come under more and more pressure to reduce carbon emissions, alternative solutions for powering tower cranes are becoming big business. Boxes containing the batteries, fuel cells and mechanical devices needed to drive the tower cranes working on building sites are becoming more common around the world.

Who are neargrid's biggest competitors in powering tower cranes?

One of Neargrid's main competitors in terms of powering tower cranes is Ampd Energy, a Hong Kong-based company, founded in 2014. It started out making lithium-ion battery-powered backup power supplies for hospitals and data centres. AMPD Energy's CEO Brandon Ng with an AMPD Energizer at Tseung Kwan O Industrial Estate.

Can hydrogen power cranes?

Yet other companies are investing heavily in using hydrogen in the place of diesel to power cranes and other machinery. UK-headquartered temporary power specialist Aggreko has been working with Belgian headquartered CMB.Tech to develop a 100 per cent hydrogen genset.
