Does aggregation affect the intermittency of solar power generation?

The aim of this article is to address the fundamental scientific question on how the intermittency of solar power generation is affected by aggregation, which is of great interest in the wider power and energy community and would have profound impacts on the solar energy integration into the energy supply and Net-Zero Implementation.

Why do solar systems need alternative generation sources?

Scientific Reports 12, Article number: 1363 (2022) Cite this article The inherent intermittency of solar power due to diurnal and seasonal cycles has usually resulted in the need for alternative generation sources thereby increasing system operation costs.

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about \$7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 12 and 17 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

How to ensure large-scale adoption of solar energy?

To ensure large-scale adoption of solar energy, along with maintaining the momentum of growth of the investment flows, it is also essential to ensure equitable distribution of investments which must be achieved by addressing the challenges faced by the developing and underdeveloped regions.

Does a globalized solar photovoltaic module supply chain save money?

Modelling shows that a globalized solar photovoltaic module supply chain has resulted in photovoltaic installation cost savings of billions of dollars.

Will solar module prices be higher in 2030?

Projecting the same scenario forwards from 2020 results in estimated solar module prices that are approximately 20-30 per cent higher in 2030 compared with a future with globalized supply chains.
