

Solarventi price Greenland

Where does solarventi work?

SolarVenti has experience with almost 60,000 systems in the field - both in countries as far north as Greenland and Lapland and, at the other end, Southern Europe and Australia with the toughest sun conditions. We know that our systems hold up. And we know that they hold up for a long time.

Why should you choose solarventi?

The position of the solar cell inside the panel means that - combined with an optimized internal air flow and a specifically developed and tuned SV regulator unit - SolarVenti systems have a particularly high output per visible surface area on the solar collector panel. In other words: smaller solar air collector panel with a bigger effect.

What makes solarventi solar air collectors different?

SolarVenti's solar air collectors are all using our own patent. This gives SolarVenti models numerous advantages in terms of performance, reliability and maintenance... SolarVenti's patented technology is - simply explained - a particular intake of fresh air to the panel through many hundreds of small holes on the backside of the panel.

How many solarventi systems are there?

Today, we are market leaders, with almost 60,000 SolarVenti systems operating with satisfied customers in large parts of the world. SolarVenti's solar air collectors are all using our own patent. This gives SolarVenti models numerous advantages in terms of performance, reliability and maintenance...

Does solarventi have self-cooling?

With the 100% secure self-cooling of the SolarVenti system, the solar cell and ventilator can never be damaged from extraordinarily high panel temperatures. The self-cooling will always function, independent of a power supply.

What is solarventi's patented technology?

SolarVenti's patented technology is - simply explained - a particular intake of fresh air to the panel through many hundreds of small holes on the backside of the panel. The intake is important for the construction overall. The particular intake is, among other things, important for the high efficiency and the operational security of the systems.

SolarVenti je nezamenjiva in poceni rešitev za objekte, ki so nezasedeni v zimskem času, obenem pa so primerni tudi za bivalne prostore.
