

South Sudan advanced power solutions

What is South Sudan's role as a power utility?

Its role as a power utility is expected to intensify as programmes to increase electricity access in South Sudan are implemented. It is proposed under the Electricity Bill 2015 as the regulatory entity for the electricity sector in South Sudan. It would function as the energy regulator whose functions would include the creation of regulations.

How many energy companies are there in South Sudan?

There are about fourteen of-grid energy companies in South Sudan, and their services include i) selling solar products, ii) engineering, procurement, and construction (EPC), iii) independent power production (IPPs) and iv) developing mini-grids.

Is result based financing a solution to South Sudan's energy crisis?

Result Based Financing (RBF) to accelerate access to energy services, an instrument commonly used in other markets to bridge the affordability gap, is also lacking in South Sudan. The energy sector's policy and enabling regulatory environment is still in its formative stage, especially for the of-grid sector.

How can humanitarian agencies contribute to solar energy in South Sudan?

Refugee contexts in countries such as Jordan have also led to the increased transition to solar energy through donor-led initiatives. Humanitarian agencies can also play a critical role in generating demand for solar systems in South Sudan refugee settlements, where biomass is predominantly used as energy source (Lemi & La Belle, 2020).

What is the governance of the energy sector in South Sudan?

The institutional and regulatory governance of the of-grid energy sector in South Sudan is still nascent. Table 2 below lists the major players participating in the governance of the energy industry and their positions as defined by applicable laws.

Do health institutions in South Sudan have access to electricity?

About 30% of South Sudan health institutions do not have access to electricity. However, there were disparities where 15.0% of health institutions in urban areas lacked access to electricity compared to 33.2% of health institutions in rural areas reported lacking electricity access.

Second, following the shutdown of Juba power station in 2015, electricity in Juba has either been self-generated or supplied from neighboring households and independent power producers (IPPs). A little over forty-seven percent (47.57%) of the respondents generate their own power and 36.33% get power through the neighborhood mini-grids.

The cement industry faces a big challenge: meeting global infrastructure needs while reducing its impact on the environment. One effective way to do this is through carbon capture, a process that captures and removes carbon dioxide (CO₂) emitted during cement production.. Cement production is a major source of CO₂ emissions, responsible for about 8% of the world's total.

After months of negotiations aimed at ending a civil war that has killed tens of thousands of people and forced some 4.5 million from their homes since December 2013, South Sudan's President Salva Kiir and rebel leader Riek Machar signed new power-sharing and ceasefire agreements on 5 August.

South Sudan advanced power solutions

South Sudan, located in East-Central Africa, is a landlocked nation with a mostly rural population. The country's geography, with vast plains interrupted by the White Nile and its tributaries, can cause challenges for infrastructure development, particularly for technologies and telecommunications. Infrastructure solutions are mostly in a primitive state due to the region's ...

The conflict in neighbouring Sudan has also had a destabilising effect on the region, with over 800,000, according to the United Nations, Sudanese refugees fleeing to South Sudan since the outbreak of conflict, placing a significant strain on resources and exacerbating the already precarious security situation.

Of these, 4.9 million people are on the brink of famine. More than 8.6 million people - about 16 per cent of the total population of the country - have fled their homes since the conflict started. They have sought refuge within Sudan or in neighbouring countries, making Sudan the largest displacement crisis in the world.

About 130 MW of South Sudan's installed power capacity will be operational by 2025, a portion of which will be used to power the nation's numerous oil fields. The SSEC's inadequate generation and delivery capacity results in frequent blackouts and load shedding seem unlikely to meet the nation's estimated 300 MW power consumption.
