

How can Sudan achieve energy self-sufficiency?

Encouraging solar and wind power in the country's energy portfolio could help Sudan achieve its goal of energy self-sufficiency. Egyptian policies such as nurturing and promoting renewable technologies and scientific research, feed-in tariffs, and tax exemptions could help Sudan achieve its objectives.

Is solar energy making a comeback in Sudan?

Fortunately, the country is now witnessing a comeback to solar energy as it is an effective tool to drive development, employment, and stability - particularly in rural and agriculture-focused communities. "In Sudan, access to energy is a critical tool, and solar is an effective way to achieve this.

Can solar power irrigation pumps in Sudan?

Solar panels power irrigation pumps on a farm in Northern State (UNDP Sudan/Muhanad Sameer) KHARTOUM (Sudan) - Sudan was one of the first nations to understand the importance of renewable energy. In this bid, the country took good steps in early 1980s for the development of rural areas via the technologies of solar and wind energies.

What should Sudan's government do about solar energy?

Mr. Afanasiev advised the Sudan's government to continue its current direction of expansion of renewable energy solutions and continue efforts to make solar technology as accessible as possible. The cost should be reduced by tax and duty exemptions.

Does Sudan have solar energy?

Solar energy has the greatest potential for use in Sudan compared to other forms of RE. Sudan possesses an average annual radiation range of 436 to 639 W/m² per year, which exceeds the annual global average. The period of solar radiation in the country is between 8.5 and 11 hours per day .

Is solar a viable alternative to fossil fuels in Sudan?

"In Sudan, access to energy is a critical tool, and solar is an effective way to achieve this. First, it is an alternative to fossil fuels, so importation and transport challenges are avoided, environmental benefits provided, and ongoing fuel costs eliminated.

Harvesting solar energy using CSP technologies in Sudan will not only increase the electricity generation capacity but also guarantees energy security and sustainability through creating and implementing energy mix ...

With 60% of Sudan's population lacking access to electricity, the findings highlighted in the report - like the high potential for wind energy in Northern State, River Nile and Red Sea, and Sudan's high levels of solar irradiance ...

Sudan new innovations in solar energy

Sudan, with its abundant sunshine and vast untapped solar potential, is poised to make significant strides in solar energy development. In recent years, the country has been working to create a favorable policy and regulatory environment to attract investments and promote the growth of solar energy projects.

Sudan is a promising country which has a huge potential for renewable energy. It has a large potential for wind energy in the Northern State, River Nile, and Red Sea, and Sudan's high levels of solar irradiance throughout the country are significant opportunities for mitigation against the threats of climate change.

The Solar Lab, funded by the Global Environment Facility (GEF), UNDP, SSMO and Ministry of Energy and Mining, will test and certify 20-30 imported solar panels, systems and solar-powered water pumps per day - with thousands already destined for Sudan's agricultural sector.

Sudan is a promising country which has a huge potential for renewable energy. It has a large potential for wind energy in the Northern State, River Nile, and Red Sea, and Sudan's high ...

Speaking today at the virtual launch of a UNDP report, Empowering Sudan: Renewable energy addressing poverty & development, the Acting Minister highlighted the report's suggested policies and actions, which ...

Harvesting solar energy using CSP technologies in Sudan will not only increase the electricity generation capacity but also guarantees energy security and sustainability through creating and implementing energy mix plans in line with the UNs' SDGs for 2030.

This coincides well with the huge loss in crude oil export revenue in 2011 for Sudan after South Sudan's independence (revenue fell from almost \$11 billion in 2010 to just under \$1.8 billion in ...

Encouraging solar and wind power in the country's energy portfolio could help Sudan achieve its goal of energy self-sufficiency. Egyptian policies such as nurturing and promoting renewable technologies and ...

“In Sudan, access to energy is a critical tool, and solar is an effective way to achieve this. First, it is an alternative to fossil fuels, so importation and transport challenges are avoided, environmental benefits provided, and ongoing fuel costs eliminated.

Sudan is a big "untapped" renewable energy market. Given Sudan's immense technical potential for solar, wind, geothermal, biomass, and other renewables, coupled with a sizeable population and an escalating demand for energy to fuel economic growth, renewable energy is ideally positioned to assist Sudan's...

With 60% of Sudan's population lacking access to electricity, the findings highlighted in the report - like the high potential for wind energy in Northern State, River Nile and Red Sea, and Sudan's high levels of solar irradiance throughout the country - equate to renewable energy offering significant opportunities, and mitigation against ...

This opening article Spots a green light on the applications of solar energy and the role that solar energy can play to enhance the economic development in Sudan. The empirical data...

With 60% of Sudan's population lacking access to electricity, the findings highlighted in the report - like the high potential for wind energy in Northern State, River Nile and Red Sea, and ...

The Solar Lab, funded by the Global Environment Facility (GEF), UNDP, SSMO and Ministry of Energy and Mining, will test and certify 20-30 imported solar panels, systems and solar ...

Encouraging solar and wind power in the country's energy portfolio could help Sudan achieve its goal of energy self-sufficiency. Egyptian policies such as nurturing and promoting renewable technologies and scientific research, feed-in tariffs, and tax exemptions could help Sudan achieve its objectives.

Speaking today at the virtual launch of a UNDP report, Empowering Sudan: Renewable energy addressing poverty & development, the Acting Minister highlighted the report's suggested policies and actions, which provide a roadmap to unlock the potential of sustainable and affordable renewable energy in Sudan and expand energy access.
