How does Sweden produce electricity?

From the 1970s until today, we have built up, produced electricity, and decommissioned nuclear power. Crude oil and petroleum products are supplied to the Swedish energy system, among other things, to supply Sweden with fuel. A large part of Crude oil and petroleum products are refined into petrol and diesel to then be exported.

What energy sources does Sweden use?

The supply of energy to the Swedish energy system is based on renewable energy sources such as water, wind, sun, and biomass. We also import energy products such as nuclear fuel, biofuels, fossil fuels and natural gas.

Why is electricity important in Sweden?

All types of power have an important function in Sweden's energy system. The Swedish electricity system is interconnected with several European countries. Export and import of electricity are essential for a robust and sustainable power system.
