

The impact of photovoltaic panels in winter

Do solar panels work in the winter?

Yes, solar panels work in the winter. In fact, solar panels can generate electricity in almost any type of weather. Cold weather doesn't affect solar panel performance (unless temperatures go below -40°C), since they operate on sunlight, which is still available in winter in the UK - albeit, at much lower levels than in the summer.

Does cold weather affect solar panels?

Cold weather doesn't affect solar panel performance (unless temperatures go below -40°C), since they operate on sunlight, which is still available in winter in the UK - albeit, at much lower levels than in the summer. This is one reason why solar panels generate less electricity in winter - the days are just shorter.

Why do solar panels generate less electricity in winter?

This is one reason why solar panels generate less electricity in winter - the days are just shorter. There also tend to be more cloudy days in winter, which can reduce the solar panels' output.

How does snow affect solar panels?

A dusting of snow has little impact on solar panels because the wind can easily blow it off. Light is able to forward scatter through a sparse coating, reaching the panel to produce electricity. It's a different story when heavy snow accumulates, which prevents PV panels from generating power.

How much electricity does a solar panel produce in winter?

According to our calculations, solar panel output decreases by around 83% in the winter compared to the summer. To give an idea of what that means, a standard 3.5 kilowatt (kW) solar panel system will produce around 362-kilowatt hours (kWh) of electricity per month during the summer. In winter, that drops to 52 kWh.

How can I improve my solar panels during the winter?

There are a few actions you can take to improve the performance of your solar panels during the winter. These include: Adjusting the tilt of your solar panels can help capture more sunlight since the sun is lower in the sky during the winter. It will also encourage snow or rain to slide off more easily.
