What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

What is a solar pile structure?

Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum. These vertical supports anchor the panels securely to the ground, ensuring stability and resistance against environmental factors.

How do engineers design foundations for solar panels & support structures?

Based on a thorough analysis of the site, engineers design suitable foundations for solar panels and support structures. The foundation design takes into account factors such as soil bearing capacity, settlement, and potential for soil liquefaction or other geotechnical hazards.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities--such as those with large, heavy solar panels or in regions with significant wind forces--may necessitate the use of concrete or composite piles.

How many piles do Solar Contractors need per day?

According to Savage, solar contractors typically want to average 150 to 200 piles driven per day per machine. And, large-scale solar farms can have hundreds of thousands of piles to be driven. This makes efficiency and accuracy so important because contractors don't want to have to go back and redo anything.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.
