Does land surface radiation affect PV energy production in the barren area?

Conclusions The observed land surface radiation and heat balance of PV plants is used to develop a sophisticated model of the impacts of PV energy production in the barren area. To our knowledge, this is first time that such a model has been developed.

How do PV plants contribute to surface energy balance over barren area?

The surface radiation contributions of PV plants to the surface energy balance over barren area were written as follows, (1) $NSW = (1 - a - e) \cdot S$ for the shortwave component and (2) $LW = (1 - \nu) \cdot L W_o$ for the longwave component, where the left-hand side of Eq.

Can PV plants affect the climate in a barren area?

The simulation results suggest that PV plants under the two scenarios could impact the local climate in the barren area, causing local climatic changes in the lower-level atmosphere (10-m wind speed, land surface temperature, and 2-m specific humidity).

What is the orientation of a photovoltaic power station?

The overall orientation is due south, with a north-south spacing of 6.87 m and an east-west spacing of 1.55 m. The station consists of 100 strings that form a photovoltaic sub-array, making it currently the largest single photovoltaic power station in the world, with a total installed capacity of 1000 MW.

How can a new PV module remedy deficiencies in existing PV energy models?

To remedy the deficiencies in the existing PV energy models, the newly sophisticated PV module established in this paper will include both the land surface radiation balance, sensible heat balance and the surface physical dry process over the locations of PV plants.

How does photovoltaic energy affect local climate?

The rapid growth in penetration of renewable energy resources into power systems attracts more attention to its impacts on local climate. Due to the existence of large-scale photovoltaics (PV) power plants, the land-use pattern and the radiation balance between earth's surface and atmosphere have been changed.
